Experts in lightability™

# **INOA LED**

#### Elegance, comfort, and creation of atmosphere

The INOA LED luminaire is an elegant lighting LED solution enabling significant energy savings compared to equivalent luminaires fitted with traditional light sources.

It is available with a wide range of design options. Choose a flat glass version to get the most out of its photometric performance, or a striated deep protector to create a comfortable elegant atmosphere. All the INOA LED versions may be combined with a small or large canopy.

The discreet elegance of the INOA LED luminaire makes it an ideal choice for enhancing any landscape.

RAILWAY STATIONS & METROS

#### Concept

The INOA LED luminaire is composed of high-quality materials. The base section, bracket arms, top cover and cover plug are made of die-cast aluminum. To offer high impact resistance, polycarbonate and acrylic were chosen for the protectors and diffusors.

The INOA LED luminaire is available in a wide range of versions. The diffuser bowl can be equipped with an additional clear or striated protector. Both by day and at night, this second protector surrounds the luminaire with subtle charm.

At night, this creates a touch of magic as when people approach the luminaire, the drop of light in the protector seems to move under the reflections.

The INOA LED luminaire offers several light distributions to meet the requirements for lighting parks and squares as well as urban and residential areas. It is equipped with Schréder LensoFlex2 photometric engines, delivering high visual performance while making significant energy savings.

INOA LED is available with slip-over mounting onto a Ø60mm spigot. It can be combined with three different types of lighting column and a painted aluminium wall bracket.

The discreet elegance of the INOA LED luminaire makes it an ideal choice for enhancing any landscape.

INOA LED is available with various options

Thanks to its state-of-the-art technology, the INOA LED luminaire enables significant energy savings.

#### TYPES OF APPLICATION

- URBAN & RESIDENTIAL STREETS
- BRIDGES
- BIKE & PEDESTRIAN PATHS
- RAILWAY STATIONS & METROS
- CAR PARKS
- SQUARES & PEDESTRIAN AREAS

#### **KEY ADVANTAGES**

- High visual comfort
- Low power consumption
- Multiple configurations
- Magic of light due to protector
- FutureProof : smart upgradability
- Surge protection 10kV

Post-top mounting on a Ø60mm spigot.

For easy installation, INOA LED is delivered with a pre-fitted cable.

LensoFlex®2 is based upon the addition principle of photometric distribution. Each LED is associated with a specific PMMA lens that generates the complete photometric distribution of the luminaire. The number of LEDs in combination with the driving current determines the intensity level of the light distribution.

#### Back Light control

As an option, the LensoFlex®2 and LensoFlex®4 modules can be equipped with a Back Light control system.

This additional feature minimises light spill from the back of the luminaire to avoid intrusive light towards buildings.

A. Without Back Light control | B. With Back Light control

#### Custom dimming profile

Intelligent luminaire drivers can be programmed with complex dimming profiles. Up to five combinations of time intervals and light levels are possible. This feature does not require any extra wiring.

The period between switching on and switching off is used to activate the preset dimming profile. The customised dimming system generates maximum energy savings while respecting the required lighting levels and uniformity throughout the night.

A. Dimming level | B. Time

#### PIR sensor: motion detection

In places with little nocturnal activity, lighting can be dimmed to a minimum most of the time. By using passive infrared (PIR) sensors, the level of light can be raised as soon as a pedestrian or a slow vehicle is detected in the area.

Each luminaire level can be configured individually with several parametres such as minimum and maximum light output, delay period and ON/OFF duration time. PIR sensors can be used in an autonomous or interoperable network.

# INOA LED | CHARACTERISTICS

GENERAL INFORMATIO	N					
Recommended installation height	4m to 6m   13' to 20'					
FutureProof	Easy replacement of the photometric engine and electronic assembly on-site					
Driver included	Yes					
CE mark	Yes					
ENEC certified	Yes					
French law of December 27th 2018 - Compliant with application type(s)	a, b, d, e, f					
Testing standard	LM 80 (all measurements in ISO17025 accredited laboratory)					
HOUSING AND FINISH						
Housing	Aluminium					
Optic	PMMA					
Protector	Tempered glass Polycarbonate PMMA					
Housing finish	Polyester powder coating					
Tightness level	IP 66					
Impact resistance	IK 08					
Vibration test	Compliant with modified IEC 68-2-6 (0.5G)					
Access for maintenance	By loosening screws on the top cover
